DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the centering ring to be coupled to a substrate holder and to a focus ring must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

The specification has been checked to the extent necessary to determine the presence of all possible minor errors. However, the applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. For best understood, claims 1, 7-10, 15 and 16 are rejected under 35 U.S.C. 102(e) as being anticipated by Ludviksson et al. (US Pub. 2004/0125360), hereinafter Ludviksson.

Like claim invention, Ludviksson discloses a focus ring assembly (Fig. 1) for surrounding a substrate (35) on a substrate holder (30) in a plasma processing system comprising a focus ring (60) comprising an upper surface, a lower surface, and one or more wear indicators (28) coupled to at least one of said upper surface and said lower surface (Figs. 2A-2D), wherein said focus ring is configured to be centered about said substrate, wherein the focus ring is made from at least one of silicon, quartz, etc. ([0051]-[0053]) and wear indicators (28) comprise a hole with different/various shapes/sizes/depth in upper, lower surface or at a fraction distance between the upper and lower surface ([0059]).

Allowable Subject Matter

4. Claims 2-6 and 11-14 are objected to as being dependent upon a rejected base claim, but would be considered if rewritten in independent form including all of the limitations of the base claim and any intervening claims with submitted drawings supporting/corresponding to those claims' features

5. The following is a statement of reasons for the indication of allowable subject matter: the prior fails to establish a centering ring constructed in a specific manner that correlates and

Art Unit: 2821

supports the focus ring and the substrate holder in order to centralize the focus ring in reliable manner.

Citation of pertinent prior art

6. The prior art made of record and not relied upon is considered pertinent to applicants' disclosure.

Nishimoto et al. (US Pat. 6,837,966) discloses method and apparatus for an improved baffle plate in a plasma processing system.

Tamura et al. (US Pat. 6,815,352) discloses silicon focus ring and method for producing the same.
